

REVIVEAI

Find revenue slipping away. Recover it intelligently. Prove the money.

THE PROBLEM

Failed payments
Subscription failures
Checkout abandonment
Overdue invoices

THE SOLUTION

Predict what is recoverable
Choose the right intervention
Apply financial guardrails

THE OUTCOME

Verify payment success
Measure recovered revenue
Audit every decision

Razorpay-focused • AI + ML + Policy Engine + Outcome Verification

From Blind Retries to Intelligent Recovery

TRADITIONAL

Payment Failed

Retry

Retry Again

Stop

Static rules treat many cases the same.

REVIVEAI

Payment Event

Detect Revenue at Risk

Understand Customer

Predict Recovery

Recommend Action

Policy Check

Recover + Verify

We optimize for actual revenue recovered — not the number of retries.

End-to-End Architecture

AI recommendation → deterministic policy → authorized execution → verified outcome → audit trail

Core principle: AI recommends. Policy controls. Humans oversee. Systems execute.

AI + ML Intelligence

ML — RECOVERY PREDICTION

Predicts recovery_probability (0–1)

Uses:

- amount & payment method
- failure reason
- payment history
- retry count
- overdue days
- customer segment
- historical recovery

AI — INVESTIGATION

Explains why the case is recoverable.

Example:

Recovery probability: 84%

Diagnosis: Temporary payment failure

Recommendation: RETRY_PAYMENT

Confidence: 87%

Structured output; no direct money control.

ML predicts → AI investigates → Policy decides whether it is safe.

Financial Guardrails + Razorpay

POLICY ENGINE

Customer opted out → STOP

Retry count ≥ 3 → STOP

Dispute detected → HUMAN REVIEW

High-value case → HUMAN REVIEW

Low confidence → HUMAN REVIEW

Every decision records reason + policy version.

RAZORPAY INTEGRATION

Razorpay Test Mode

Payment / order lookup

Payment-link integration

Webhook ingestion

Signature validation

Idempotency protection

Outcome verification

No production secrets in frontend.

Financial AI must be controlled, auditable and safe — not just intelligent.

Business Impact: Prove the Money

REVENUE AT RISK

Money potentially lost

What needs recovery?

REVENUE RECOVERED

Verified successful payments

The primary success metric

RECOVERY RATE

Revenue Recovered
÷ Revenue At Risk
× 100

BASELINE VS REVIVEAI

Run both strategies on the same test batch.
Measure incremental revenue recovered.

ALSO MEASURE

Actions avoided
Human escalations
Average recovery time
Expected recovery value

Do not claim recovery from an executed action — count it only after outcome verification.

Why ReviveAI?

NOT JUST...

- ✗ A chatbot
- ✗ A simple retry engine
- ✗ A prediction-only model
- ✗ A dashboard with fake metrics

IT IS...

- ✓ Revenue recovery control plane
- ✓ ML + AI decision intelligence
- ✓ Deterministic financial guardrails
- ✓ Human-in-the-loop
- ✓ Verified revenue attribution
- ✓ Complete audit trail

DETECT → PREDICT → DECIDE → PROTECT → ACT → VERIFY → RECOVER

Recover more legitimate revenue. Reduce unnecessary actions. Protect customers.
